

WPK

**Werkstoffprüfung-Planung-
Kontroll-Ges.m.b.H.**

**CERTIFIED
ROPEWAY INSPECTIONS**

WPK – certified expertise for more than 20 years

Since the company's foundation in 1992, we have demonstrated the full range of our expertise in over 1000 ropeway inspections in more than 10 countries.

According to SeilbG 2003 (Austria), we have been listed by the BMVIT as a safety assessor (since 2004) and a so-called "§20 person" for construction projects that do not require a permit (since 2006).

The employees of our test and inspection body can also carry out power plant inspections. Moreover, we are also active as a safety engineering center for operational safety and a technical office.

Ropeway inspections

Certified inspection body

As an officially certified inspection body, we carry out the following inspections:

- Approval inspections of new and second-hand ropeways
- Periodic and additional inspections, e.g. according to SeilbÜV 2013 (Austria)
- Inspection of gates, cranes and elevators, rescue equipment etc.

As required, the inspection findings are recorded in inspection reports, inspection protocols, inspection log books or certificates and the inspection result is documented.

Certified test body

As an officially certified test body, we can carry out all tests directly on the site of the customer, prepare test reports, test protocols, test log books or certificates and document the test result. We apply the following test procedures:

- VT – visual testing
- PT – penetrant testing
- MT – magnetic particle testing
- ST – magnet-inductive rope testing
- UT – ultrasonic testing
- RT – radiography testing
- ÖVE – testing according to ÖVE/ÖNORM EN 50110-1 (Austria)

We are certified according to national and international standards (incl. ASME Code).

Notified body

Since March 2004, we have been recognized as a notified body according to guideline 2000/9/EC. We carry out conformity assessments by means of type examination, individual testing as well as product testing and issue the corresponding EC certificates of conformity according to “Module B”, “Module F” and “Module G”.
